ICPSR PROCESSING NOTES FOR #37853
Self-Perceptions of Creativity & Arts Participation, United States, 2018

1. **Confidentiality/Disclosure Risk:** In order to protect respondent anonymity and prevent disclosure risk, ICPSR has masked the continuous variable **AGE** and has spot-masked the following variables in the data: **Q1, Q8,** and **Q10.** The confidential information in these variables was replaced with "MASKED BY ICPSR'.

2. **Qualitative Data File:** The variables **Q1, Q3_11OE, Q11, Q8,** and **Q10** were exported to a comma delimited (CSV) file which is available for download and can be linked to the dataset via the **CASEID** variable.

3. **Variable Differences:** The variable **STATENUM** occurs in the data but not the documentation. This variable was computed by ICPSR as an equivalent and numeric version of the string variable **STATE**.

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

CASEID: Unique identifier

Based upon 3,447 valid cases out of 3,447 total cases.

Location: 1-5 (width: 5; decimal: 0)
Variable Type: numeric

WEIGHT1: Post-stratified weights, controlled within 3 generational groups and scaled to the total number of all completes. Best for general population analyses

Based upon 3,447 valid cases out of 3,447 total cases.

- Mean: 1.0000000000
- Minimum: 0.0271378153
- Maximum: 15.2523244340
- Standard Deviation: 1.2118996489

Location: 6-18 (width: 13; decimal: 10)
Variable Type: numeric

WEIGHT2: Post-stratified weights, controlled within and scaled to each of the 3 generational groups. Best to use for single generational group analyses

Based upon 3,447 valid cases out of 3,447 total cases.

- Mean: 1.0000000000
- Minimum: 0.0385418417
- Maximum: 16.2447159330
